# Micro-surgical endodontics

## From planning to execution

December 17-18, 2026  
Paris

# Course objectives

This 2-full day course is designed to provide participants with the ability to learn all about micro-endodontic surgery. Starting from decision making, selecting, and organizing the appropriate armamentarium to make the procedure quick and smooth, all the way to treatment planning for a predictable treatment outcome. Participants will be able to perform a surgery on a 3D surgical model using surgical operating microscope and proper armamentarium. They will incise and reflect simulated gingiva, make osteotomy, apicoectomy, retro-preparation, retro-filling, and suturing. They will also apply GTR techniques during their hands-on training needed in the management of through & through defects.
